

GEN3SIS SOLUTIONS

Applications, Integration & Automation

AppG360

What is AppG360?

MAppG360 is Gen3sis' solution for integrating applications and automating business processes intelligently, connecting systems through APIs, integration platforms (iPaaS), and automation (BPM/RPA).

Enables process orchestration end-to-end entre aplicaciones empresariales ERP, CRM, ITSM, sistemas legados y soluciones SaaS habilitando operaciones más ágiles, confiables y escalables, bajo un enfoque de Industria 5.0, donde la tecnología potencia el trabajo humano y el valor del negocio.

The problem it solves

Many organizations operate with disconnected applications and manual processes that cause delays, operational errors, and high maintenance costs.

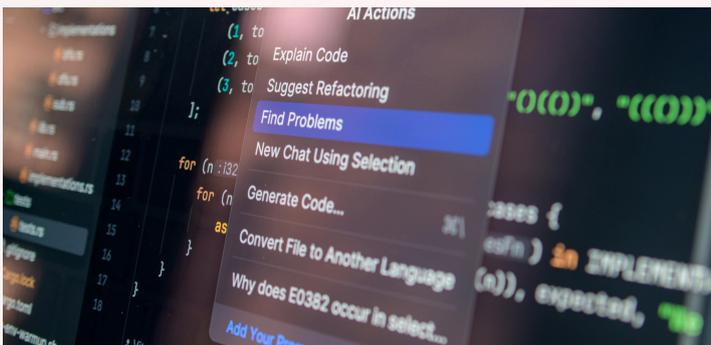

The lack of integrations Real-time data processing leads to duplication of information, constant reprocessing, and delays in launching new digital services, overwhelming IT teams and limiting innovation capacity.

What does the solution include?

- Integration of business applications using standardized APIs
- End-to-end business process orchestration
- Automation of manual tasks with BPM and RPA
- Exposure and management of reusable services (APIs)
- Catalog of integrations and flow traceability
- Continuous monitoring, control, and optimization of integrations

Key benefits

- Significant reduction in cycle times in integrated processes
- Elimination of errors caused by manual tasks and double data entry
- Acceleration of time-to-market for new services and features
- Reduced operational burden on IT teams
- Increased reuse of digital assets (APIs and integrations)
- Greater control and visibility of business processes

Next step

Are your applications truly connected to support the agility and efficiency your business needs?

Let's talk and design an integration and automation strategy together with AppG360.
