GEN3SIS SOLUTIONS

Networks & Connectivity

NetG360

What is NetG360?

NetG360 is Gen3sis' solution for designing, implementing, and operating resilient, secure, and scalable enterprise network infrastructures, ensuring stable connectivity that is ready for business growth.

It integrates LAN, Wi-Fi, SD-WAN technologies, and advanced connectivity models under an Industry 5.0 approach, where automation and artificial intelligence enhance operations, while strategic control remains in human hands.

The problem it solves

Many organizations operate with **legacy, fragmented, or poorly visible networks**, which results in frequent outages, poor performance, security risks, and difficulties in scaling locations, users, or new digital services.

NetG360 eliminates these points of friction, providing reliable, observable, and secure connectivity aligned with the organization's current and future needs.

What does the solution include?
• Design and implementation of enterprise LAN and Wi-Fi networks
• SD-WAN connectivity and multi-site environments
• Network segmentation and access control (Zero Trust / NAC)
• Carrier integration and hybrid connectivity
• Network monitoring, observability, and operation
• Continuous optimization of performance, availability, and experience

Key benefits
• High availability and operational continuity
• Improved user experience and productivity
• Secure, segmented, and controlled networks

Next step

Is your network ready to support the growth, security, and experience your business needs? Let's talk and design together a solid, secure, and future-proof connectivity with **NetG360.**
