

GEN3SIS SOLUTIONS

Business Continuity & Cyber Resilience

ResiliG360

What is ResiliG360?

ResiliG360 is Gen3sis' solution designed to guarantee business continuity in the event of natural disasters, technological failures, or cyberattacks, ensuring the availability of critical systems and data.

It combines business impact analysis, continuity and recovery plans, resilient architectures, and immutable backups, under an Industry 5.0 approach, where technology protects the business and strengthens human decision-making.

The problem it solves

Organizations face increasingly frequent disruptions that can halt critical operations, generate significant economic losses, and affect the confidence of customers and regulators.

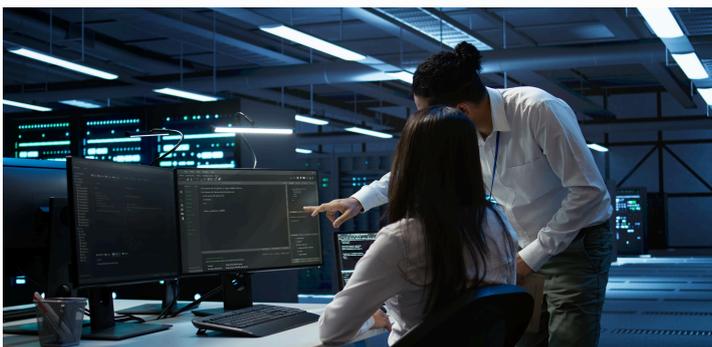

The lack of tested continuity plans, vulnerable backups, and non-resilient architectures **exposes the business to prolonged downtime, loss of information, and penalties for regulatory non-compliance.**

What does the solution include?

- Business Impact Analysis (BIA)
- Business Continuity Plans (BCP)
- Disaster Recovery Plans (DRP)
- Resilient architectures and high availability across multiple sites
- Immutable and isolated (air-gapped) backups
- Regular recovery tests and crisis drills
- Technical runbooks and documented procedures
- Continuous improvement based on results and metrics

Key benefits

- Significant reduction in downtime (RTO)
- True protection of critical data with verified backups
- Operational continuity even in the face of severe cyberattacks
- Compliance with continuity standards and regulations
- Less financial and reputational impact in the event of incidents
- Greater resilient maturity of the organization

Next step

Is your organization truly prepared to continue operating in the event of a disaster or cyberattack?

Start a Business Resilience Workshop with Gen3sis and let's build your continuity strategy together with **ResiliG360**.
